# Task 1: Google-Powered Search Box UI

Create a stylish search box UI similar to the one shown below. The search should feel modern and clear, offering the ability to search either a specific website or the entire web.

✅ Your design should include:

- A bold title (e.g., **Google Powered**) and subtitle (e.g., *Site Search*)
- A rounded search input field
- A visible "Search" button
- Radio buttons to select search type: **Search this site** or **Search the web**
- Icons for additional settings (e.g., magnifier, dropdown arrow, layout options)

💡 Tips:

- Use **shadows** and **rounded corners** for depth
- Style the radio buttons for a custom look
- Align elements using **Flexbox**
- Maintain a consistent color scheme and modern design
- Ensure keyboard accessibility and mobile responsiveness

Use only **HTML + CSS**. Avoid frameworks like Bootstrap. Focus on layout, usability, and aesthetics.
